

CONSIDERATIONS

1.
The printing precision of the screen should be 75-120dpi (scale 1:1) (When the color have the gradual changes, it is required to use Photoshop to create a gradient ramp.)
2.
Color Mode: CMYK
3.
File format: PDF, JPEG, or TIF, (support AI, PSD, CDR)
4.
If the file format in AI or CDR, please package it includes the fonts and all the materials used in the file, instead of just saving it.
5.
When you make the design, the distance from the security thread to the edge of the image should be 50mm. The image should be in the template, the bleed should be 50mm. When you export the file in JPEG format, all the guideline should be delete.
